About This Game

Dr.Green is a 2D retro, arcade, action platformer, inspired by games like Megaman and Ninja Senki. Take control of the orphan Dr.Green, on his mission to save the forest and take revenge on the evil forces trying to destroy it. Dr.Green is the debut game of Indie developer & Pixel artist Johan Aronsson and is both an environmental statement and a captivating story of a young child uncovering his past.

Story

One day Dr.Green awakes to find his home under attack. The forest he grew up in was under siege by workers. Their sole intent to destroy the natural beauty of his home for profit. Dr.Green, inspired by their actions makes a stand against them in order to stop the destruction and save his home. Embarking upon this journey will take Dr.Green to places beyond the comfort of his home and leads him to discover mysterious secrets surrounding his past.

Dr.Green is about fighting for what you believe in, even if things seem hopeless.

Gameplay

In Dr.Green you will experience a classic, arcade inspired gameplay. Taking control over the orphan Dr.Green you use your pea gun, loaded with powerful seeds to take down your enemies. Since Dr.Green was raised in the forest and spent a lot of time with its inhabitants he has learned the ability to double jump to be able to keep up. Double jump will prove to be a good quality on his journey and a key to progress.

Features

- Controller Support (Analog & D-pad)
- Rebindable keys for keyboard
- Colourful pixel art graphics
- Captivating double twisted story
- Chiptune inspired soundtrack

Dr.Green have 8 levels in total, each guarded by a boss, more or less important to the story. All levels have a new element or a new enemy introduced, carefully created to fit the area they are in and often inspired by previous enemies's behaviour to give you a nice and smooth, but still, challenging experience.

The game is not created in the mind of giving the player another game to blast through. I wanted to maintain the horrible, yet enchanting difficulty old platformers like Megaman had. Rewarding the player for getting to know the enemy, their movements, how the levels work, finding the timers. The game is constructed in a way that everytime you game over, you do it knowing something new about the obstacle and get you closer to the finish line.

The gameplay is not always entierly linear and there are levels that provide alternative ways to mix things up a little and also encourage the player to try other ways to gain time or find more score.

Throughout the level you will find seeds that you can collect, these will give you score. You will also find caged animals, that award you when freed. Depending on your final score, you will get different endings.

Title: Dr.Green
Genre: Action, Indie
Developer:

A reasonable "high tech" EMU add-on with no bugs found (as yet!). Pity there are no career scenarios Puzzles,troca de personagens e implantes de silicone (haha),otimo jogo cheio de quebra-cabe\u00e7as ,time cativante e horas e horas de conquitas!\u00f3timo jogo para quem curte jogos de plataforma e com puzzles!. Constant crashing. First I had an issue that would not let me start the game, which was a pretty easy fix. Then, I got the same error message again whenever I try to start a game. Restarts didn't do anything and I don't care enough to look for a fix. Thank god for Steam's refund function.

Save yourself some money.. Lol I feel like this is one giant \u2665\u2665\u2665\u2665ing virus, it opens a black screen and super hard to shut down, I have to end the process which took a few attempts.. I thought that maybe this would be a game to spend time playing while other things download. The problem is, it's way to repetitive. I got bored about halfway through the tutorial, but I pressed on, because I thought it might get better from there. It did not. The interface is rather sloppily put together, with the numbers on the abilities not actually working, and just having an overall feel of being designed solely for mobile and then simply released as a PC game. Even the sale price I bought it at is too much to be asked for. In my opinion, the developers should either have spent a lot more time on the PC interface, or just stuck to mobile-exclusive.. i love how you can have pets makes game even more fun

each pet dose diffrent task

so it helps out. I play this on windows 10 with a ps3 contorller! I feel that it is actually sometimes easier to play than the wii version. The game itself is fantastic in terms of game play and I enjoyed the wii version alot. I didn't get to finish playing it on wii because it got to a point where it lags so much on the wii and I ended up playing not finishing the game. However this ported version is wonderful in the I can configure the graphics settings so that I can turn off the after effects where the brightness and the glowing can be turned off so I don't have to strain my eyes too much. The 60fps is great whil I can turn off the other useful effects that I never really liked anyways. So its speedy and fun now!

Very happy I can get the chance to finish the game (not done yet..)! For newcomers that like cute rpg, you gotta get a controller and play this game! It's gameply and simulation style is very creative and enjoyable!

. I got this game in some kind of bundle. I played it for about half an hour for the cards and then uninstalled it. The frame rate is terrible, the controls are sluggish and unresponsive and the missions are all boring. Suggest you avoid.

The game is terrible, it tries to be uplink but dumbs the game down to "Do this, okay that is done do that" and doesn't just hold your hand the entire game but straps you to it with a harness and some objectives didn't show for me so overall get Uplink, reasons: 1) costs less. 2) a lot more fun and in depth 3) Has onlink and a ton of other mods to get if you get bored 4) typing into a console isn't the only thing a hacker does 6) the game has variety so I rate this 1/10 poorly constructed money grabbing game with DLC that sucks\u2665\u2665\u2665\u2665\u2665too.. A must own if you have a Vive. Works great with a Steam Controller too.

10/10 would stare into the sun to this glorious soundtrack again!. Decent Bomberman clone, works well in LAN. Sadly, still light years away from what Atomic Bomberman gave you 20 years ago (and today, with a bit of faith and an IPX emulator).

Having to register to play and the clunky interface don't help much.. I've always admired the look of good graffiti, but never had the inclination or opportunity to try my hand at it in real life.

I consider myself something of an artist, and in the past I've mostly worked digitally, using a Wacom tablet and various digital art programs.

I've never painted with a spraycan before, so I can't speak on how this game holds up versus reality, but I can say that it feels really good to me. We've got pressure control on the trigger, and then of course there's the distance and angle that you hold the can relative to the wall.

To me it feels like a pretty accurate simulation, and I find it a lot of fun to use.

The game provides you with a big collection of pre-defined colours, or you can use various colour wheels and palettes to select exactly the colour you want.

There are a variety of different spray caps that you can switch between for different spray dynamics.

I've found that NY Fat Cap is my favourite general purpose one, but I do switch over to Featherduster when I want to do subtle shading, Thin Cap for small details, and Cyclopes when I want to get nice neat circles.

Right from the start in the first hour or so I found myself producing art that I felt proud of, and which looked like that "good graffiti" I've always admired. I can't guarantee that everything you paint will turn out amazing, but from what I can see it provides a very good simulation platform for you to have a go of spray painting, and enough depth to let you create beautiful art if you're willing to put the time into it.

I've had trouble connecting with friends in multiplayer sometimes, but with perseverance we've managed to get together and have a lot of fun collaborating. Art with friends is always something I enjoy, so I'm glad this game supports that.. I liked this HOG. It's rather laid-back, and not taking itself seriously. Not much story, but I ignore those in HOGs anyway, as they seldomly make much sense. It's colorful, HO puzzles are clear, there are some other types of puzzles too, but it's rather short. Still worth a spin, especially at < 3 Euros.. The Good :

- Origin story of both schools (best campaign IMO w/ Shinovi Versus)
- Good old Senran Kagura Fan service
- A lot of missions, 3 difficulties for each (and some get really tough)

The less Good :

- Could be more unlockables / cloth options
- Recycled Areas from previous games
- No online co-op / pvp but there wasn't any in the 3DS version

If you are a fan of the series and/or never played the debut title on 3DS, this is a great starting point. I'm also glad I can support Marvelous and Xseed to port more of these games in future.
