Define a sequence w_0, w_1, \dots in V as follows: $w_0 = 0$; $w_{n+1} = w_n + 2nv_n$ for $n=0,1,2,\dots$. I want to show that $w_n = nv_n$ for all n . I know that it is enough to show that $w_n = 0$ for all sufficiently large n . I thought that for $n=0,1,2,\dots$ we will have $w_n = nv_n$ and $w_n = (n+1)v_{n+1}$. We also know that $\lim_{n \rightarrow \infty} v_n = 0$, hence we have $w_n = nv_n$ for every n . My question is about that last step where I assumed $w_n = (n+1)v_{n+1}$. If I just assumed that then it is obvious that $w_n = 0$ for all n , but I don't know how to prove the general w
